

CORRECT AND SAFE INSTALLATION

G&B System for windows and doors installation

We certify the quality of our products for the safety and efficiency of your windows

A **CE Approval** must be obtained for all products, including windows and doors intended for use in construction. The certification requirements involve strict testing in which the producer submits their product to ensure your window high characteristics of acoustic and thermal insulation. **A correct installation and the use of specific products and excellent quality is therefore decisive** to ensure that the characteristics of a good frame is not prejudiced.

G&B Fissaggi, thanks to the experience with the industry, has recently developed a system of hardware and installation accessories qualified for the window frame. In particular, the products subject to compliance testing at the **Consorzio LegnoLegno**, have been certified **PO/SI - 01 on wooden frames** (pending approval for the categories of aluminum windows and PVC). This certification confirms that our products, in accordance with the specific procedures of installation, **ensure performance is maintained of thermal and acoustic insulation of windows CE certified**, and therefore contribute to the maintenance of certified performance and durability of the frame itself.
